Optical Coherence Tomography

Retina Scan Duo

THE ART OF EYE CARE
User Friendly

NIDEK 3-D auto tracking, auto shot, and a user friendly interface allow rapid and easy image capturing. Combining an OCT and fundus camera in one system saves time and space, and improves the diagnostic workflow and efficiency.

User Friendly Interfaces for Two Capture Modes

Standard and professional modes are available. Each mode has a different image capture interface which can be selected based on clinic preference.

Standard Mode
for general screening and analysis

Professional Mode
for advanced screening and analysis

In the standard mode, operation is as simple as a fundus camera, which is helpful for daily practice.

The professional mode is favored for advanced, detailed screening and analysis. In this mode, the scanning position can be adjusted to the phase fundus image and it supports capturing precise OCT images.
3-D Auto Tracking and Auto Shot

The acclaimed 3-D auto tracking and auto shot functions allow easy imaging of the fundus and all its features. Once alignment is completed, both the OCT and fundus images can be captured in a single shot.

Operation with Joystick for Flexible Alignment

The joystick helps the operator make fine adjustments during alignment to improve the precision, even for eyes with poor fixation which cannot be tracked with automated tracking systems.

Space-saving Unit

The small footprint replaces two units with one combined unit.
The OCT and fundus imaging are high definition images that are comparable in quality to the standard NIDEK OCT system and fundus camera. The Retina Scan Duo is versatile enough to be tailored to the individual diagnostic requirements for any practitioner.

### OCT

- **HD Image Averaging (max. 50 images)**

- **Selectable OCT Sensitivity – ultra fine, fine, regular**

Selecting the OCT sensitivity based on ocular pathology allows image capture with higher definition or at high speed. Ultra fine and fine sensitivities are used to capture high definition images and regular sensitivity is used to capture images at high speed.

- **Enhanced Image**

The image enhancement function allows adjustment to image brightness for advanced image quality and details.

- **Wide Area Scan (12 x 9 mm) / Wide Area Normative Database**

A 12 x 9 mm wide area image centered on the macula can be captured with the Retina Scan Duo. The 9 x 9 mm normative database provides a color-coded map indicating distribution range of the patient’s macular thickness in a population of normal eyes.

- **Multiple OCT Scan Patterns**

A wide range of scanning patterns is available to allow the practitioner to select a scan that suits the retinal region and ocular pathology.

* The anterior segment adapter is optional.
Fundus Camera

★ 12-megapixel CCD Camera

The Retina Scan Duo has a built-in 12-megapixel CCD camera, producing high quality fundus images.

★ Stereo and Panorama Photography

The Retina Scan Duo navigates stereo and panorama photography with target marks displayed on an observation screen, which enables an operator to easily capture stereo images and a panorama composition.
Value Added Features

In addition to combining standard OCT and fundus camera features, the Retina Scan Duo offers additional diagnostic features allowing the practitioner to stay a step ahead of current standards.

**Fundus Autofluorescence (FAF)**

The fundus autofluorescence (FAF) function is an advanced screening feature. The FAF is a non-invasive method to evaluate the RPE without contrast dye. The function is helpful for detecting early stage retinal disorders.

**En face OCT**

En face OCT imaging is for advanced studies of retinal pathology including factors that compromise photoreceptor function and retinal and choroidal vasculature.

A. Thickness Map (ILM - RPE / BM)
B. En face (IPL / INL Offset: +121 µm, Thickness: 42 µm)
C. B-scan Image
   1. En face (ILM Offset: 0 µm, Thickness: 42 µm)
   2. En face (IPL / INL Offset: +21 µm, Thickness: 42 µm)
   3. En face (RPE / BM Offset: -41 µm, Thickness: 42 µm)
   4. En face (RPE / BM Offset: 0 µm, Thickness: 125 µm)

**NAVIS-EX**

NAVIS-EX is an image filing software, which networks the Retina Scan Duo and other NIDEK fundus imaging devices.

- Analysis and report
- Normative database
- Long axial length normative database
- Scalability of connecting with other NIDEK products
- DICOM connectivity
Anterior Segment Adapter*4

The anterior segment adapter*4 enables observation and analyses of the anterior segment.

Angle Measurement

- ACA
  Angle between posterior corneal surface and iris surface

- AOD500 (AOD750)
  Distance between iris and a point 500 µm (or 750 µm) from the scleral spur on posterior corneal surface

- TISA500 (TISA750)
  Area circumscribed with AOD500 (or AOD750) line, posterior corneal surface, line drawn from scleral spur in parallel with AOD line, and the iris surface

Corneal Measurement

- Corneal thickness
  Corneal thickness of apex and user selected sites

- Corneal thickness map
  Map of corneal thickness plotted radially

*1 The fundus autofluorescence (FAF) function is available for the FAF model. *2 Photos courtesy of Kariya Toyota General Hospital. *3 The long axial length normative database is an optional software. *4 The anterior segment adapter is optional.

### Fundus camera

- Type: Non-mydriatic fundus camera, color, FAF*  
- Angle of view: 45°  
- Minimum pupil diameter: ø4 mm  
- Light source: Xenon flash lamp 300 Ws  
- Flash intensity: 17 levels from F1 (F4.0 +0.8 EV) to F17 (F16 +0.8 EV)  
- 0.25 EV increments  
- Camera: Built-in 12-megapixel CCD camera

### Common specification

- Working distance: 45.7 mm  
- Display: Tilttable 8.4-inch color LCD  
- Dioptic compensation for patient’s eyes:  
  - -33 to +35 D total  
  - -33 to -7 D with minus compensation lens  
  - -12 to +15 D with no compensation lens  
  - +11 to +35 D with plus compensation lens  
- Internal fixation lamp:  
  - LED  
  - Horizontal movement: 36 mm (back and forth)  
  - Vertical movement: 32 mm  
- Chinrest movement: 62 mm (up and down, motorized)  
- Auto tracking:  
  - ±16 mm (up and down)  
  - ±5 mm (left and right)  
  - ±5 mm (back and forth)  
- PC networking: Available

### Power supply

- AC 100 to 240 V ±10%  
- Power consumption: 350 VA

### Dimensions / Mass

- OCT: 370 (W) x 536 (D) x 602 (H) mm / 38 kg (standard model)  
  - 39 kg (FAF model)  
  - 14.6 (W) x 21.1 (D) x 23.7 (H)* / 84 lbs. (standard model)  
  - 86 lbs. (FAF model)

### Optional accessories

- Anterior segment adapter, external fixation lamp, isolation transformer, motorized optical table, PC rack, long axial length normative database

* The fundus autofluorescence (FAF) function is available for the FAF model.
